But one of the main tasks I need to do is making modifications to the database that stores content on the site. I've been looking for an API or something that would allow me to access and manipulate the database, but I haven't found anything yet. Do you have any suggestions of how I could accomplish this? A: You have the API documentation for the Drupal database in /sites/all/modules/contrib/drupal-contrib/drupal/includes/database/database.api.php (if you're on Drupal 6) or /modules/contrib/drupal-contrib/drupal/includes/database/database.api.php (if you're on Drupal 7). The section about importing an ODBC database into Drupal says: Importing ODBC databases into Drupal 7 and 7.5 Importing an ODBC database into Drupal requires a small amount of work by using an Import/Export facility provided by Database Backup Restore. Importing from a SQL database is identical to exporting. If you can export your database to a SQL database, you can import it. But, if you want to import to an ODBC database, you need to enable the ODBC connection (and configure it). For example, if your database connects to an Oracle database, download and install the ODBC Data Source Administrator. As a temporary work-around, you
